Please see above for different benchmark between the Vortex86 family. About the Vortex86EX CPU/DRAM 400/200 performance, if you compare with Vortex86DX 800/300, the Vortex86DX has better performance on CPU Integer and Float, Vortex86EX is using DDR3 so the DRAM performance is much better. In general, Vortex86EX performance is closed to Vortex86DX even EX has lower clcok speed because of DDR3.
